EDUCATION

2024 - Present

UC BERKELEY

- EECS Honor Student
- GPA: 3.957
- Units: 97.22
- Structure and Interpretation of Computer Programs
- Data Structures and Algorithms
- Computer Architecture
- Linear Algebra
- Designing Information Devices and Systems I/II
- Microelectronic Devices and Circuits
- Multivariable Calculus
- Discrete Mathematics and Probability Theory
- Physics Mechanics, Electricity, Magnetism
- CCNA

2021 - 2024

FREMONT HIGH SCHOOL

- GPA: 4.3 / 4.0

SKILLS

- Team Player
- Time Management
- Assertive
- Persistent
- Critical Thinking
- Public Speaking

LANGUAGES

- English (Fluent)
- Hebrew (Fluent)

ZIV BEHAR

Software Engineer - AI Systems & Infrastructure

PROFILE

Tech innovator and entrepreneurial leader driven by a passion for leveraging technology to drive positive change and solve complex problems.

EXPERIENCE

Stealth Startup

Dec 2024 - Present

Founder & Sole Developer

- Designed, built, and trained a special state-of-the-art transformer-based AI model in computer vision.
- Created an app to streamline the creation of training data.
- Engineer end-to-end mobile ↔ cloud pipeline for large-scale image clustering, captioning, and retrieval (100k+ photos) using GPU-accelerated vision models.
- Multithreading, parallelism, algorithm design, MLOps, real-time WebSocket API.
- PyTorch, React Native, NodeJS, Python, gRPC.

Status (acquired)

Sep 2024 - Jan 2025

Co-Founder & CTO - SkyDeck Batch 20

- Launched real-time "library-seat radar" for UC Berkeley to save time finding a study spot; 3.5k monthly active users in month 1 and 30% WoW growth; acquired by UC Berkeley Student Union (ASUC); accepted to SkyDeck Pad-13 Accelerator program.
- WiFi traffic sensors + REST API to our website streaming live occupancy for every floor of campus libraries.
- Created a marketing Instagram page with 1600+ Followers, reaching every student on campus 4 times (200,000+ views)

OrderCubic/Qbook

Jun 2022 - Aug 2024

Founder & Sole Developer

- QBook is a web and mobile application used to reduce office expenses and help manage cubicle arrangements between employees.
- A SaaS application, NodeJS support with finalized Back-end and Front-end. MySQL compatible. Grid and Canvas technologies for the Front-end. Automatic live update of all users when there is a change in DB. Hosted on AWS, autoscaling & CI/CD.
- <https://github.com/zivbeh/OrderCubic>

AI Video Generator

Mar 2023 - Oct 2023

Personal Project

- Built an open-source pipeline that converts a single text prompt into a fully produced MP4: Webscraping stories edited by GPT-4, external media APIs fetch images/video clips, and MoviePy stitches the assets into a polished sequence.
- Added AI text-to-speech narration and OAuth-secured auto-upload to YouTube, delivering genuinely "hands-free" content generation from idea to published video.
- <https://github.com/zivbeh/auto-video-gen/>

PROGRAMMING LANGUAGES

Javascript

HTML/CSS

NodeJS

Python

C

SQL/MySQL

Java

Assembly intel x86 / RISK-V
